

The best outcomes in health and social care depend on two things being true at the same time — the right people being in the room, and those people being able to communicate effectively. TYP Group and tupi.solutions exist to make both of those things happen. We are not competitors. We are complementary — and we are working together.

TYP Group

TYPGROUP.ORG

The ecosystem for verified professionals and genuine roles.

WHAT WE DO

TYP connects organisations with verified talent, fractional expertise, and trusted professional support. In regulated health environments, a mis-hire carries reputational and patient-safety risk. TYP's verification-first model removes that risk.

WHAT TYP OFFERS HEALTH-TECH COMPANIES

- Verified candidates — credential-checked, not self-reported
- Fractional C-level and specialist expertise on demand
- Navigation services — career positioning and coaching
- Anonymous platform access — professionals own their data

If your company is moving from pilot to scale, or from founding team to full workforce — TYP is built for that moment.

tupi.solutions

TUPI.SOLUTIONS

The technology behind the interpreters — never instead of one.

WHAT WE DO

tupi.solutions is the software infrastructure for interpreting agencies, language service providers, and freelance interpreters serving healthcare, policing, community, and government. Built for the people who make understanding possible. Launching 2026.

WHAT TUPI.SOLUTIONS OFFERS HEALTH ORGANISATIONS

TupiNow

Empowers agencies of all sizes to offer on-demand access to their interpreters via phone and video.

TupiMG

Interpreting agency management software for compliant, efficient operations.

TupiEX

Interpreter expense management and connectivity for agencies and freelancers.

Together these applications form an end-to-end platform, built in the UK to strict NHS and Government compliance standards from day one.

tupi.solutions does not replace the human interpreter with an algorithm. It partners with interpreters and agencies of every size, providing them with tools to do their job better, faster, and more compliantly — enabling them to compete in a market that demands strict compliance and security.

When a child arrives at A&E and can't explain what hurts, this is not a moment for an AI transcription model. It needs a human.

Why Together?

Health-tech companies scaling into the NHS and equivalent markets face two converging challenges at the same moment — building a verified, credentialed team quickly, and ensuring their services are supported by properly managed language access.

Both matter. Both are often underestimated. And both tend to become urgent at exactly the same point — when a company wins its first anchor contract and needs to move fast without cutting corners. TYP and tupi.solutions are here at the Isle of Man Innovation Challenge 2026 because this cohort represents exactly that moment.
